

Date of Admission

Date of Admission: Dec 23, 2025

Date of Discharge

Date of Discharge: Dec 26, 2025

Destination At Discharge

home

Final Discharge Diagnoses:

IUP 40wks. transportation insecurities. limited prenatal care. late prenatal care. unmedicated seizure d/o. RH+. GBS negative

Hospital Summary

Operations and Procedures

induction. NSVD. seizure precautions. seizure medicine restarted. routine pp care

Brief Hospital Course

Pt admitted for induction. Induction and delivery and pp course were unremarkable. pt was restarted on her anti seizure medication. pre and post delivery HgbS were 8.7 pt was discharged home in stable condition.

Follow Up

f/u two weeks with Frazier

Scheduled

Levetiracetam (Keppra), Unknown Dose PO BID, (Reported)

Scheduled PRN

Acetaminophen (Acetaminophen), 30 ML PO Q6HRP PRN for PAIN

Discontinued Medications

Clindamycin Hcl (Clindamycin Hcl), 300 MG PO QID

Unable To Verify Medications (Unable To Verify Medications), (Reported)

Zofran 4MG Tab (Ondansetron Odt), 4 MG PO TIDP

Patient Instructions

Activity Recommendations: Exercise/sex/sports limit

Recommended Home Diet: No restrictions

Hx Gravida: 3

Hx Para: 1

Expected Date of Delivery: Dec 23, 2025

HPI:

24yoG2P1 at 40wks who presents for induction. Pt's EDD is 12/23/25 based on 18wk ultrasound. Pt has had three visits this pregnancy with her first visit being in the second trimester. she states she has transportation insecurities. She has a h/o NSVD at term of a VFI in 10/7/2024. Pelvis is proven to 5#4. EFW 6#13. Pelvis is adequate. fetus is vtx. fetal tracing is reassuring with moderate variability and a normal baseline. Pt has a h/o epilepsy. her last seizure was a year ago. she has not had her medicine for several weeks. she takes liquid keppra but is not sure of the dose. Pt is RH+, Rubella immune, GBS negative. she did not have a glucola.

Chief Complaint:

induction

Allergies:

Coded Allergies:

Penicillins (Verified Adverse Reaction, Severe, THROAT SWELLING, 12/23/25)

Exam

Presentation: Vtx

Anesthesia: Epidural

Delivery: SVD

Delivery:

Pt was admitted for induction for completed EDD. Pt had limited and late prenatal care. she was induced with pitocin. she had an epidural placed at 3cm. membranes spontaneously ruptured. clear fluid was noted. she progressed to complete and pushed for <10mintues over an intact perineum. the shoulders and body followed the fetal head with ease. the mouth and nares were bulb suctioned. the baby was dried with care to keep the umbilical cord at the level of the placenta. the cord was doubly clamped and cut. a vigorous baby was handed to mom. cord blood was obtained. the placenta was expressed. the perineum was intact. bleeding was controlled with 800mcq of cytotec PR, IV pitocin and 1G TXA. Neonate and mom are recovering in the room via kangaroo care protocol
