Date of Discharge

Date of Discharge: Dec 25, 2025

Destination At Discharge

home

Final Discharge Diagnoses:

IUP 40w0d. tobacco abuse/dependence. moderate thin meconium stained amniotic fluid. chorioamnionitis. RH+. GBS negative.

Hospital Summary

Operations and Procedures

cervical ripening. pitocin induction. NSVD. treatment of chorioamnionitis. routine pp care

Brief Hospital Course

Pt was admitted for cervical ripening and induction at completed EDD. Pt is a two pack a day smoker. Induction was remarkable for chorioamnionitis that developed at 6cm. pp course was unremarkable. Hgb on discharged was . she was discharged home in stable condition on PPD2. she was to f/u in two weeks.

Follow Up

f/u in two weeks with Frazier

Scheduled

Prenatal Vits W-Ca,Fe,Fa (Prenatal Vitamins), 1 TAB PO DAILY, (Reported)

Scheduled PRN

Hydroxyzine Hcl (Hydroxyzine Hcl), 2 TAB PO HSP PRN for SLEEP

Patient Instructions

Activity Recommendations: Exercise/sex/sports limit

Recommended Home Diet: No restrictions

Exam

Presentation: Vtx

Anesthesia: Epidural

Delivery: SVD

Delivery:

Pt was admitted for induction at 40wks. she is a two pack a day smoker. cervix was unfavorable. cervix was ripened with cervidil followed by pitocin induction. membranes were artificially ruptured. thin dark stained meconium was noted. she progressed to complete and pushed for 30minutes over a first degree laceration. the shoulders and body followed the fetal head with ease. the cord was doubly clamped and cut. the neonate was brought to the warmer with minimal stimulation and the mouth and nares were bulb suctioned. the placenta was expressed. the first degree laceration was repaired with 2-0 vicryl in usual fashion. bleeding was controlled with IV pitocin, 800mcq of cytotec PR and 1G TXA. Delivery was of a VFI. Apgars were 6 and 8. baby and mom are recovering in the room via kangaroo care protocol.

Position: ROA

Placenta: Spontaneous

Umbilical Cord: 3V

Laceration degree: 1

Repair: 2-0 Vicryl

Delivery Quantitative Blood Lo: 225

Delivery count correct: Yes

Specimens: placenta, cord blood

Complications: None

HPI:

22yoG1 who presents for induction at 40w0d. Pt is a two pack a day smoker. she was seen for an OB visit and sent to L&D for an NST and AFI. EFW was 7#6. AFI was 14. NST was noted to have questionable variables that corrected with observation. CE 1/80. Discussed options with pt. based on NST and h/o heavy smoking, induction was decided upon. Prenatal course is otherwise unremarkable. EDD 1/7/26 by sure LMP c/w ultrasound. Pt is RH+, Rubella immune, GBS negative. She had an abnormal glucola and a normal 3H GTT. Fetus is vtx. Pelvis is adequate.
